EDUCATION

American University of Sharjah, UAE
Bachelor of Science in Computer Science

GPA: 3.80
August 2022 - June 2026

Relevant Coursework: *Machine Learning & Data Mining, Neural Networks & Deep Learning, Intelligent Recommendation Systems, Web Application Development, Artificial Intelligence, Computer Architecture & Organization, Computer Networks, Design-Analysis of Algorithms, Data Structures and Algorithms*

EXPERIENCE

Junior Software Developer

GC International, Dubai, UAE
June 2025 – August 2025

- Led delivery of a public website that enhanced client engagement and onboarding, and built an end to end hiring system that replaced manual workflows, cutting application processing time by nearly 40 percent and removing the need for third party platforms.
- Built the full stack using Astro, React, Three.js, and C#/.NET with Airtable CMS, deployed on AWS Amplify with proper security setup.
- Set up CI/CD pipelines and version control practices, and improved performance through targeted optimization.

Information Technology Intern

Etihad Water and Electricity, UAE
May 2025 – June 2025

- Created dynamic SharePoint sites and custom .NET Framework pages using HTML/CSS/JS, jQuery, and React; optimized performance with async loading and CDN integration.
- Imported, cleaned, and modeled diverse datasets in Microsoft Power BI; engineered DAX measures and built interactive dashboards to surface key operational metrics.
- Configured VMware vSphere VMs, managed Active Directory user policies and shadowed NOC/SOC teams.

Data Science Intern

Aura Technologies, Dubai, UAE
June 2024 – Aug 2024

- Developed an AI-based customer matching system using FAISS and fuzzy logic, reducing manual data validation by ~80% and increasing revenue per user by ~25% through higher true-positive matches.
- Analyzed and visualized customer datasets using Python, SQL, and Excel to extract behavioral trends and insights.
- Conducted QA testing on web applications, identifying and documenting usability issues to maintain high performance standards.

Research Assistant

Departments of Computer Science & Engineering and Finance
American University of Sharjah
June 2025– Present

- Conduct interdisciplinary research across AI, biomedical signals, and fintech analytics in the CSE and Finance departments.
- Build and benchmark ML and deep learning models (Transformers, CNNs, RNNs/LSTMs, SVMs) for signal classification, NLP tasks, and anomaly detection.
- Develop Python analytics tools that integrate external APIs and open-source models for company profiling, anti-fraud, and AML detection on large datasets.

Teaching Assistant

Department of Computer Science and Engineering
May 2024 – Present

- Conduct labs and tutorials reinforcing lecture concepts; facilitate discussions to enhance student engagement.
- Provide individual and group support via office hours and email; prepare and maintain course materials.
- Grade assignments, assessments, and projects, delivering constructive, detailed feedback to students.

PROJECTS

Anime Recommendation Model

- Scraped anime forums for ratings, tags, genres, and synopses, then implemented a multi-stage hybrid recommender system (non-personalized, Jaccard & TF-IDF content-based, user/item CF).
- Merged model outputs with a weighted ensemble to optimize personalization, popularity, and diversity, mitigating cold-start issues.
- Deployed as a React/Flask web app, achieving an RMSE of 1.21/10

FishNet – Usable Phishing Detection Extension

- Built the first multi-stage phishing detection browser extension with real-time URL analysis plus ML classification.
- Reached ~99% detection accuracy and delivered clear, user-friendly warnings to reduce risky clicks.
- Engineered an end-to-end pipeline (feature extraction, similarity checks, and model scoring) and packaged it as a production-style extension.

KHAYAL – Arabic EEG Imagined Speech Sentence Classifier

- Developed the first EEG-based imagined speech classifier for Arabic language sentences using a novel pipeline.
- Achieved ~70% overall performance and built a reproducible end-to-end training and evaluation pipeline for sentence-level decoding.

Corporate Website Launch

- Led a team to build the company's first site using Astro & React, featuring Three.js 3D animations
- Integrated Airtable as a headless CMS via AWS Lambda functions to call the Airtable API, eliminating the need for a dedicated backend
- Deployed the application on AWS Amplify, ensuring CI/CD automation and scalable hosting

Fault Detection in Grid-Tie Photovoltaic Plant Operation

- Adapted and merged datasets sourced from a published research paper into a unified CSV, handling conversions and timestamp alignment.
- Trained and compared Decision Trees, KNN, Naïve Bayes, Support Vector Machines and ANN to classify multiple fault states, achieving 99% accuracy with ANN.

HONORS & AWARDS

Chancellor's List, AY 2023–24, AY 2024–25

Dean's List, all semesters since Fall 2023

Undergraduate Research Grant, AY 2025–26

CERTIFICATIONS & SKILLS

Certifications: Machine Learning, Back-End Development, IoT

Programming Languages: Assembly, C, C++, Python, JavaScript, Java, SQL, HTML, CSS

Technical Skills: Full Stack Development, Data Science, Git/GitHub, UI/UX Design, Embedded Systems & IoT

Soft Skills: Critical Thinking, Team Management, Communication, Learning Agility, Time Management & Multitasking
